EDUCATION

Bachelor of Science, Computer Science

University of Texas at Dallas - Richardson, Texas

May 2027

GPA: 3.24

- **Related Coursework:** Data Structures, Advanced Algorithm Design & Analysis, Operating Systems, Database Systems, Artificial Intelligence, Software Engineering, Systems Programming

TECHNICAL SKILLS

Programming Languages: Python, SOQL, SQL, Apex, Java, JavaScript, Swift, TypeScript, C++, C, HTML, CSS

Certifications: AWS Certified Cloud Practitioner (Sep 2026), Salesforce Certified **Agentforce Specialist** (Aug 2026),

Agentblazer Champion, Innovator & Legend (June 2026), AWS AI Practitioner (Ongoing), AWS Solutions Architect (Ongoing)

Frameworks & Technologies: Prompt Engineering, LLMs, LangChain, LangGraph, Agentforce, LWC, React, Node.js, REST APIs, System Design, Unit Testing, Test Automation, Debugging, Technical Documentation, CI/CD, DevOps, Agile & Scrum, SDLC

Cloud & Tools: Salesforce CLI, Data Loader, Data Kits, AWS (S3, Lambda, Bedrock), Git, GitLab CI/CD, Docker, Unix/Linux, MySQL, JUnit, Jira, Confluence, VS Code, Claude Code, Github Copilot, MS Office (Excel, PowerPoint)

WORK EXPERIENCE

Software Engineering Intern, *Equinix*; Dallas, Texas

May 2026 – August 2026

- Built **DealSense**, a proposed **Gainsight replacement** on a cloned Salesforce Account page in UAT to unify **Customer 360** insights across deal health, quote-to-order gaps, pricing variance, and environmental impact
- Built a custom **Lightning Web Component**, writing **Apex** to surface DealSense insights directly on the record view
- Applied Data Modeling and Data Warehousing principles by configuring **12 data streams** from Revenue Cloud, mapping approximately **12+ fields per stream** across DLOs and DMOs; the largest source object contained **80,000+ records**
- Reduced unnecessary data consolidation by **95%** through targeted **Data Filtering** while field mapping
- Created **4 Calculated Insights**, including price check, deal approval, and price variance logic, using **Python and SOQL**
- Used **free Agentforce** tokens to engineer a **non-native 2-agent** integration, launched from a custom **Lightning Web Component** to answer **Natural Language queries** grounded in **CI material**

Founder, *Paradigm*; Plano, Texas

June 2025 – Present

- Built and grew a custom PC storefront on Jawa, a marketplace focused on custom gaming PCs, with **\$329** in initial capital, scaling operations to **\$15,500+ in revenue** and **\$7,500+ in net profit**
- Developed a **Node.js + Puppeteer web crawler** using an Agile-inspired, iterative development approach to scrape **Large Datasets 200+** Jawa listings per run, normalize and validate key listing fields into structured **CSV** data, and support AI-based analysis for pricing trends and early market demand signals
- Used collected market data stored in Excel to guide data-driven Business Analytics for component selection and competitive pricing, incorporating Data Visualization to track pricing trends and Business Performance, consistently achieving **“Excellent Value” Price-to-Performance ratings** on a **0-10** scale based on performance relative to comparable market builds

Software Engineering Lead, *UTDesign (Cyber Makers)*; Richardson, Texas

January 2026 – May 2026

- Supervised a team of **4** using Agile and Scrum methodologies, owning project management across sprint planning, task delegation, and code reviews to deliver the project early while exceeding all client expectations and needs
- Architected a full-stack Fintech Platform for Financial Markets analysis using **React** and **Node.js (Next .js)** to ingest user transaction files; integrated **AWS S3** for file storage and **AWS Bedrock** to generate AI-based spending insights
- Conducted **2+** per week meetings, delivering PowerPoint **Presentations** and progress **Reports**, translating requirements into architecture and increasing team productivity by **30%**

PROJECTS

StatePlanGPT, *Personal Project* | Python, LangGraph, LangChain, LLMs, OCR, VectorDB, React

January 2026 – May 2026

- Built a **State Plan document processing and analysis system** with a Python, LangGraph, and LangChain backend and a React frontend to ingest policy PDFs and support retrieval-based analysis through a web interface
- Developed a **PDF-to-image preprocessing** step and **dual-OCR** workflow with Docling and RapidOCR, debugging hidden text artifacts to improve transcription quality, achieving over **90%** extraction confidence
- Implemented an **automated pipeline** to connect OCR grading, confidence based refinement, proposition chunking, and vector retrieval, leveraging high-performance local hardware to run local LLMs alongside cloud models for cost-efficient processing

Congressional App Challenge, *PostuRise (2024) & Loudoun School Buddy (2020)*

December 2024 & December 2020

- Built an AI-based posture correction system on Raspberry Pi using Python and OpenCV, improved detection accuracy with a custom posture dataset, and earned a Congressional Certificate of Innovation from Rep. *Pat Fallon*
- Developed a cross-platform Alexa Skill and Google Action to deliver schedules and lunch info, implemented a serverless AWS backend that handled 300+ concurrent queries, and received a Congressional Certificate of Innovation from Rep.

Jennifer Wexton

This Guy, YouTube Content Creator, Coding Channel (**40+** Educational Videos & **155K+** views)

March 2017 – Present
